

# GET A GRIP WITH YOUR SKID STEER

## INTRODUCING PRO-TECH'S NEW PRO-CLEAT TIRES

- Can be used with the majority of industry skid steers
- Narrow design allows tires to cut through snow, allowing the machine to achieve maximum traction
- Tread pattern is specifically designed for snow and ice removal (most skid steer tires are designed for landscaping and construction applications)
- Rubber compound is engineered for low temperatures

### NEW PRODUCT

## Use The Tools That Are Meant For The Job.

The all NEW Pro Cleats narrow design allows for the tire to cut through snow, complimenting the machine to achieve maximum traction. In comparison, a tradition skid steer tire provides too much cushion resulting in the skid steer riding on top of the snow. This winter, don't let your skid steer tires slow you down. Get a grip with Pro Cleat skid steer tires and stay ahead of the competition.

## Specifications

Model	Height	Ply Rating	Overall Width	Tread Width	Capacity	Wheel Size
PC02S	32.2"	10	8.7"	7.0"	11,120 lbs	16 x 6

*(All skid steers with 10x16.5 or 12x16.5 tires, using standard 8 bolt pattern)*

## Width

While not often considered, the width of your skid steer tire can significantly affect the speed of your snow removal efforts. Common skid steer tires, which typically have a wider width (10"-14") can sometimes get "bogged" down in the snow. This wide profile can also limit the tires ability to cut through the snow and make quick turns when needed. The Pro Cleat's narrow tire base (7") solves these problems by giving your skid steer nearly double the ground pressure, allowing you to maneuver through the snow with ease.

## Tread Pattern

A skid steer tire designed for use in landscaping or construction applications may underperform in the winter. Inadequate tires and a plow overflowing with snow can result in spinning tires and a frustrated operator. The tread pattern on the Pro-Cleat was designed specifically for use in snow, giving your skid steer an incredible grip on the plowing surface and helping you to improve your productivity.

## Tire Compound

The Pro Cleat's exclusive rubber compound is formulated to stay flexible in cold temperatures in snow and ice. Like all our products, the Pro Cleats are proudly molded in the USA.

**AVAILABLE TO USE WITH SNO PUSHERS,  
PLOW, BLOWERS, BROOMS, AND OTHER  
SNOW ATTACHMENTS.**
